

Heat Exchangers

Spares/Gaskets

We carry a comprehensive list of spares for all leading heat exchanger manufacturers.

We can supply both original and alternative gaskets at extremely competitive prices.

In this section is a part number reference guide for the leading heat exchangers for APV, TetraPak and Alfa Laval. For details or spares/gaskets for other types of APV/Tetra Pak/Alfa Laval heat exchangers and other manufacturers including Gea and Fischer, please call with your requirements.

Regasketting

We offer a complete on or off site service for all your plate heat exchangers service maintenance.

What happens when we receive your plates?

- Moody will arrange the collection of plates from site, including dismantling and re-installation of replacement plates where necessary.
- The plates are received and given a unique contract reference which identifies the plates throughout the process. This ensures that the plates you receive back are the same ones you sent to us.
- Any residual product is washed off.
- The gaskets are removed.
- The plates are then put into the Alkali baths for intensive cleaning.
- After cleaning, the plates are rinsed off again and taken out for visual inspection.
- The plates then go through the dye penetrant test booths, where they are inspected and any damaged or perforated plates are identified.
- A report is generated and authority is obtained for any new plates required.
- The plates are then regasketted, cured in an oven if necessary and palletised.
- The plate pack is then returned to the site cleaned and ready for use.
- Moody will then arrange the installation of the returned pack where required.
