

INSTRUCTION MANUAL

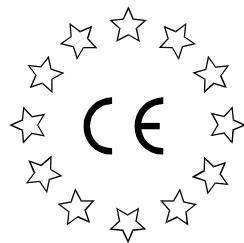

APV DELTA KHV

BALL VALVE

FORM NO.: H170761 REVISION: UK-2

READ AND UNDERSTAND THIS MANUAL PRIOR TO OPERATING OR SERVICING THIS PRODUCT.

›APV®

Declaration of Conformity for Valves and Valve Manifolds

SPX FLOW Technology Rosista GmbH, Gottlieb-Daimler-Str. 13, D-59439 Holzwickede
herewith declares that the

**APV double seal and double seat valves of the series
SD4, SDT4, SDU4, SDMS4, SDMSU4, SDTMS4, SWcip4, DSV,
DA3, DA3SLD, DE3, DEU3, DET3, DKR2, DKRT2, DKRH2**
in the nominal diameters DN 25 - 150, ISO 1“ – 6“ and 1 Sh5 - 6 Sh5

APV butterfly valves of the series SV1 and SVS1F, SVL and SVSL
in the nominal diameters DN 25 - 100, DN 125 - 250 and ISO 1“ – 4“

APV ball valves of the series KHI, KHV
in the nominal diameters DN 15 - 100

**APV single seat, diaphragm and spring loaded valves of the series
S2, SW4, SWhp4, SW4DPF, SWmini4, SWT4, SWS4, MF4, MS4, MSP4, AP/T1, CPV,
RG4, RG4DPF, RGMS4, RGE4, RGE4DPF, RGEMS4, PR2, PRD2, SI2, UF/R3, VRA/H**
in the nominal diameters DN 10 - 150, ISO 1/2“ – 4“ and 1 Sh5 - 6 Sh5

and the valve manifolds installed thereof

meet the requirements of the Directives 2006/42/EC (superseding 89/392/EEC
and 98/37/EC) and ProdSG (superseding GPSG - 9.GPSGV).

For official inspections, SPX FLOW Technology Rosista GmbH presents
a technical documentation according to Appendix VII of the Machinery Directive,
this documentation consisting of documents of the development and construction,
description of measures taken to meet the conformity and to correspond with
the basic requirements on safety and health, incl. an analysis of the risks,
as well as an operating manual with safety instructions.

The conformity of the valves and valve manifolds is guaranteed.

Authorised person for the documentation:
SPX FLOW Technology Rosista GmbH, Frank Baumbach,
Gottlieb-Daimler-Str. 13, D-59439 Holzwickede

January 2017

1. General Terms

This instruction manual has to be read carefully and observed by the competent operating and maintenance personnel.

We have to point out that we will not accept any liability for damage or malfunctions resulting from the non-compliance with this instruction manual.

Descriptions and data given herein are subject to technical changes.

2. Safety Instructions

The valve must be assembled, operated, dismantled, maintained and serviced only by competent, trained personnel. Please contact your local SPX FLOW representative if necessary.

DANGER!

- The technical safety symbol draws your attention to important directions for operating safety. You will find it wherever the activities described are bearing risks of personal injury, for individuals and material assets.

- ***Do not reach into the open valve ball or yoke!***
Risk of injury by sudden valve operation!
In dismantled valve state, there is the risk of bruising at movable valve parts.

- Regular maintenance of the valve including replacement of all seals must be scheduled in order to prevent leakages and liquid emersion.

- Remove the turning actuator before the replacement of seals.
- Before any maintenance work, the line and cleaning system must be depressurized and discharged if possible.
- Electric and pneumatic connections must be separated.
- During disassembly you may find liquid residues in the valve ball.
- Observe service instructions to ensure safe maintenance of the valve.

2. Safety Instructions

- **DANGER!**

Welded actuators are preloaded by spring force.

**Opening of the actuators is strictly forbidden.
Danger to life!**

Actuators which are no longer used and / or defective must be disposed in professional manner.

Defective actuators must be returned to your SPX FLOW sales company for their professional disposal and free of charge for you.

Contact your local SPX FLOW company.

3. Intended Use

The intended use as field of application of the ball valve is the shut-off of pipeline sections.

Unauthorized, constructional changes at the valve influence safety and the intended functionality of the valves and are not permissible.

4. Mode of Operation

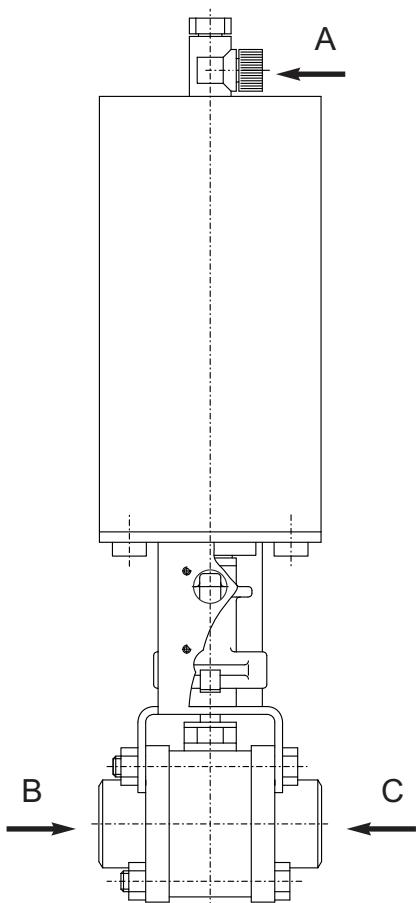

4.1. General information

There are two different valve designs:

- Ball valve **KHV** (=venturi)

The free opening cross section in the ball is reduced by about one nominal dimension compared with the pipeline.
- Ball valve **KHI** (=integral)

Smooth valve passage with full opening cross section in the dimension of the pipeline nominal diameter.
- Due to the use of high-quality stainless steel and suitable seal materials which comply with the respective requirements, the KHV (venturi) and KHI (integral) ball valves are used in the food, beverage, pharmaceutical and chemical industry.
- As the ball valve possesses dead spaces which cannot be cleaned, in food processing applications it should **be used only in CIP areas!!!**
- As shut-off element, the ball is fitted in PTFE seats at both sides. Through the floating position of the ball, in closed position a movement into the flow direction becomes possible providing for optimum sealing in the passage (**B** and **C**).
- The stem of the ball cock is generally inserted from the inside. Therefore, a collar being bigger than the bore of the body prevents the stem from being pressed to the outside. The inner stem seal takes over the sealing to the outside. In pressureless state and in case of a vacuum, sealing is ensured by springs and press ring.
- The sealing between body and counterflange to the outside is effected by the PTFE body seal in standard design. Special designs for the chemical industry with nut-spring connection (graphite seal) are possible alternatives.

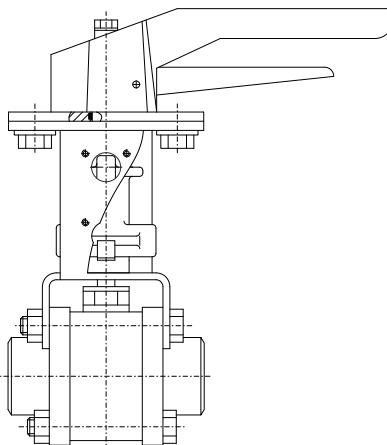

Remark: The ball cock is not equipped with a separate CIP connection to clean the existing "dead" spaces!!!

- Actuation by pneumatic turning actuator with air connection at (**A**), reset by spring force into the limit position "closed".

5. Auxiliary Equipment

fig. 5.2.

Ball valve, manually operated, with yoke to feed back ball position

5.1. Valve position indication

Switches to signal the limit position of the valve ball can be installed in the yoke area if requested.

We recommend to use APV standard proximity switches.

Type: three-wire proximity switch (ref.-No. 08-60-011/93; H16223)

Operating distance: 5 mm / diameter : 11 mm / length: 30 mm

Feedback complete with support and proximity switch (ref.-No. 15-33-023/33; H32725) for a limit position.

If the customer decides to use a different valve position indicator, we cannot take over any liability for a faultless function.

5.2 Valve position indication - valve with manual operation

Switches to signal the limit position of the valve ball can be installed in the yoke area if requested.

Specific manual actuations with feedback feature are available (fig. 5.2.) :

- a) Feedback of the closed ball position (simple variant).
- b) Feedback of both ball positions open and closed is possible.

5.2. Control unit (CU, fig. 5.3.)

Units with feedback switches and solenoid valves for the pneumatic control of the valve to be assembled on the actuator are also available in fieldbus technology.

The assembly of the control unit on the prepared variant of the turning actuator is possible.

For the start-up as well as assembly and disassembly of the different designs, the corresponding operating manuals must be observed.

fig. 5.3.

Control Unit CU4

Control Unit CU3

The following different designs are available:

| | |
|---|--|
| CU4 - Direct Connect ref.-No.; ID-No. | CU41 - T - Direct Connect 08-45-101/93; H320461 |
| CU4 - AS-interface 62 Slaves ref.-No.; ID-No. | CU41 - T - AS-i extended 08-45-111/93; H320468 |
| CU4 - AS-interface 31 Slaves ref.-No.; ID-No. | CU41 - T - AS-i standard 08-45-251/93; H324674 |
| CU3 - Profibus ref.-No.; ID-No. | CU31-Profibus 08-45-001/93; H315495 |
| CU3 - Device Net ref.-No.; ID-No. | CU31 Device Net 16-31-240/93; H209422 |

5. Auxiliary Equipment

- For the assembly of a control unit on the ball valve, an adapter is required.

| | | adapter for CU4 |
|-------------------------------|--|---|
| DN 8 - 100 ; 1/4" - 4" | designation ref.-No.; ID-No. | CU4-T-adapter 08-48-601/93; H320475 |
| | | adapter for CU3 |
| DN 8 - 100 ; 1/4" - 4" | designation ref.-No.; ID-No. | CU2 - adapter K080 08-48-416/93; H209431 |

5.4. Turning actuator for control unit

- For the installation of a control unit on the ball valve a special turning actuator and an adapter are required.
The standard actuator must be replaced.

| Turning actuator for control unit | |
|---|---|
| turning actuator K080 F/L for KHV DN 10 - 50 ; 3/8" - 2" | ref.-No.: 000 - 15 - 37 - 070/17 ID-No.: H123937 |
| turning actuator K125 F/L for KHV DN 65 ; 2,5" | ref.-No.: 000 - 15 - 37 - 106/17 ID-No.: H128942 |
| turning actuator K180 F/L for KHV DN 80 - 100 ; 3" - 4" | ref.-No.: 000 - 15 - 37 - 103/17 ID-No.: H134034 |

6. Cleaning

6.1. Cleaning recommendation

The valve passage is cleaned by the cleaning liquid during cleaning of the connected pipelines.

Depending on the degree and contents of soiling, the cleaning liquids, times and processes for the individual application must be scheduled.

The compatibility of the individually selected cleaning processes and liquids with the respectively used cleaning seals must be verified.

7. Installation

The installation position of the ball valve is arbitrary and can be selected according to the local situation and the task to be fulfilled.

- **Attention:** **Observe welding instructions 7.1.**

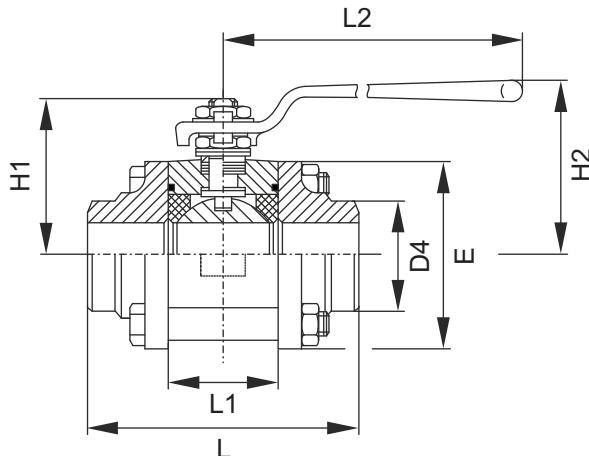

7.1. Welding Instructions

- Before welding of the valve, all sensitive parts must be removed! Dismantle the valve ball housing with seals from the mating flanges.
- Welding should only be carried out by certified welders (DIN EN ISO 9606-1) (seam quality DIN EN ISO 5817).
- Welding of the mating flanges must be undertaken in such a way that deformation strain cannot be transferred.
- TIG orbital welding is best!
- The preparation of the weld seam up to 3 mm thickness can be carried out as a square butt joint without air. (Consider shrinkage!)
- After welding of the mating flanges and after work at the pipelines, the corresponding parts of the installation or pipelines must be cleaned from welding residues and soiling. If these cleaning instructions are not observed, welding residues and dirt particles can settle in the valve and cause damage or can be transferred to other parts of the installation.
- Any damage resulting from the non-observance of these welding instructions is not subject to our guarantee.

8. Dimensions / Weights

| 80 | 3" | 88,9 | 483 | 659 | 11,9 |

9. Technical Data

9.1. General data

- max. line pressure : **10 bar**
- max. operating temperatures : **140° C**
- short-term load : **160° C**
- turning actuator
 - min. control pressure : **6 bar**
 - max. control pressure : **10 bar**
 - turning angle : **90°**
- air connection (for hose)
 - threaded angle - G1/8"
 - slewable : **tightening torque 2 Nm**

9.2. Compressed air quality:

**quality class according to
ISO 8573-1**

- **content of solid particles:** quality class 3,
max. quantity of solid particles per m³
10000 of 0.5µm < d ≤ 1.0 µm
500 of 1.0 µm < d ≤ 5.0 µm
- **content of water:** quality class 4,
max. dew point temperature + 3°C
For installations at lower temperatures
or at higher altitudes, additional
measures must be considered to reduce
the pressure dew point accordingly.
- **content of oil:** quality class 1,
max. 0.01mg/m³

The oil applied must be compatible with Polyurethane elastomer materials.

9. Technical Data

9.3.

Tightening torque, allocation of actuator size

| ball valve type | KHV („venturi“) | | | | | | | | | | |
|-----------------|------------------|-----|----|-----|----|----|----|----|------|------|------|
| DN | 10 | 15 | 20 | 25 | 32 | 40 | 50 | 65 | 80 | 100 | |
| actuator | K080 | | | | | | | | K125 | K180 | K180 |
| torque (Nm) | 3 | 3,5 | 5 | 9,5 | 15 | 20 | 24 | 60 | 95 | 150 | |
| ball valve type | KHI („integral“) | | | | | | | | | | |
| DN | 8 | 10 | 15 | 20 | 25 | 32 | 40 | 50 | 65 | 80 | |
| actuator | K080 | | | | | | | | K125 | K180 | K180 |
| torque (Nm) | 3 | 3,5 | 5 | 9,5 | 15 | 20 | 24 | 60 | 95 | 150 | |

| 9.4. Control air consumption (NL) per stroke | | | | | | | | | | | |
|--|---------------|--|---------------|--|--------------|--|--|--|--|--|--|
| actuator | K080 = 1,8 NL | | K125 = 5,5 NL | | K180 = 11 NL | | | | | | |
| | | | | | | | | | | | |

10. Materials

| | |
|--------------------|-----------------------|
| - ball | 1.4404 (DIN EN 10088) |
| - body | 1.4404 (DIN EN 10088) |
| - yoke, actuator | 1.4301(DIN EN 10088) |
| - coupling | 1.4057(DIN EN 10088) |
| - indicator | PE - hard |
| - ball seal / seat | PTFE |
| - body seal | PTFE |

| | |
|----------------------------|------------------|
| plastic parts in actuator: | |
| - bearing | Polyamide PA 12 |
| - air connection | Polyamide PA 6.6 |
| - piston | Polyacetal POM |

11. Maintenance

- The **maintenance intervals** depend on the application of the valve and should be determined by the operator carrying out regular checks of the valve.

Apart from the replacement of wear parts, ball valves are nearly maintenance-free. During the operation observe that the ball valve is always switched into the open or closed final position.

Intermediate positions can damage the seats and should be prevented. Depending on the operating conditions, the stem packing must be checked and re-sealed if necessary.

- Dismantling and installation of seals according to Service Instructions.
- Assembly and adjustment of turning actuator according to Service Instructions.
- All seals must be slightly greased before their installation.
- The inner parts of the actuator are maintenance free.

Attention! Use food-grade special grease being suited for the respective seal material, only.

Recommendation:

APV assembly grease for EPDM, FPM, HNBR and NBR
(0.75 kg /can - ref. No. 000 70-01-019/93; H147382)
(60 g /tube - ref. No. 000 70-01-018/93; H147381)

or

APV assembly grease for VMQ
(0.6 kg /can - ref. No. 000 70-01-017/93; H147380)
(60 g /tube - ref. No. 000 70-01-016/93; H147379)

!!! Do **not** use grease containing **mineral oil for EPDM seals !!!**

!!! Do **not** use **Silicone-based grease for VMQ seals !!!**

Less suited grease types can influence the function and life time.

12. Service Instructions KHV1 - H / KHI1 - H

Ball valve with manual actuation KHV1-H / KHI1-H

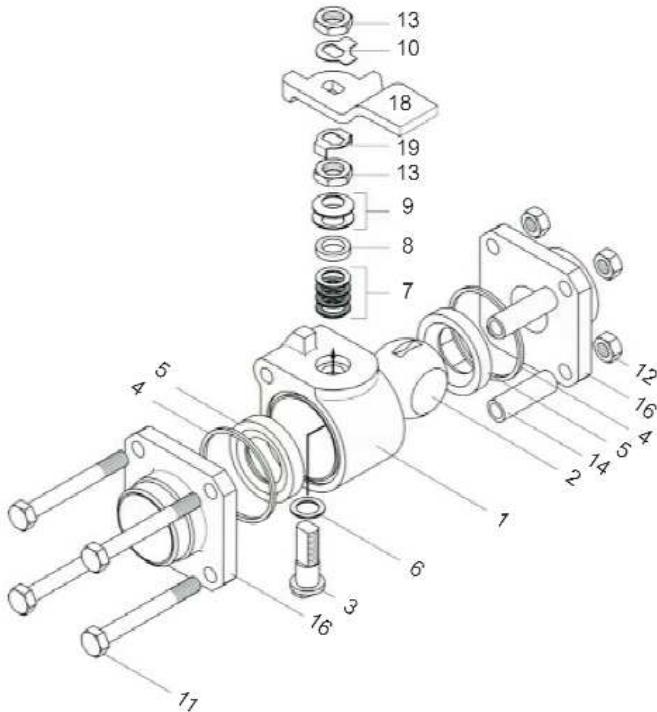

12.1. Replacement of ball and seats

Attention! Liquid residues can be in the ball valve.

1. Shut off connecting lines, let down line pressure and drain pipeline if possible.
2. Open ball valve with the handle (18).
3. Loosen all body screws (11). Remove the upper body screw which is not passing through the body and remove sleeve (14).
4. Swing out the body (1), move the ball (2) into closed position and remove it together with the seats.
5. Check ball for damage and replace it if necessary.
6. Insert ball with the new seats, replace the body seals (4) and reassemble the ball valve.
7. Tighten all body screws.

Attention! Ball and ball seal are sensitive to mechanical damage, the surfaces must not be in contact with any tools.

| Pos. 19 | lock washer |

12. Service Instructions KHV1 - H / KHI1 - H

12.2. Replacement of stem seal

1. Dismantle ball valve as described.
2. Take off the handle. For this purpose remove the nut (13) together with the washer (10).
3. Pull the lock washer (19) from the stem (3) without bending it, loosen nut (13) and dismantle parts (9) and (8).
4. Remove the stem (3) with the stem seal (6) from the inside and the stem packings (7) from the outside of the housing.
5. Re-install the new stem seal (6) with the stem (3) through the inside of the body.
6. Replace the seals (7, four pieces) in the outside of the body.
7. Assemble stem packing follower (8), the washer (9, mutually racked) and the nut (13) on the stem.
8. Tighten the body nut (13) and place it in such a manner that the lock washer (19) fits over it.
9. Assemble the fitting in its previous position.
10. Re-tighten stem nut (13) after 48 hours.

13. Service Instructions KHV2 - NC / KHI2 - NC

Ball valve with actuator

13.1. Disassembly from the line system

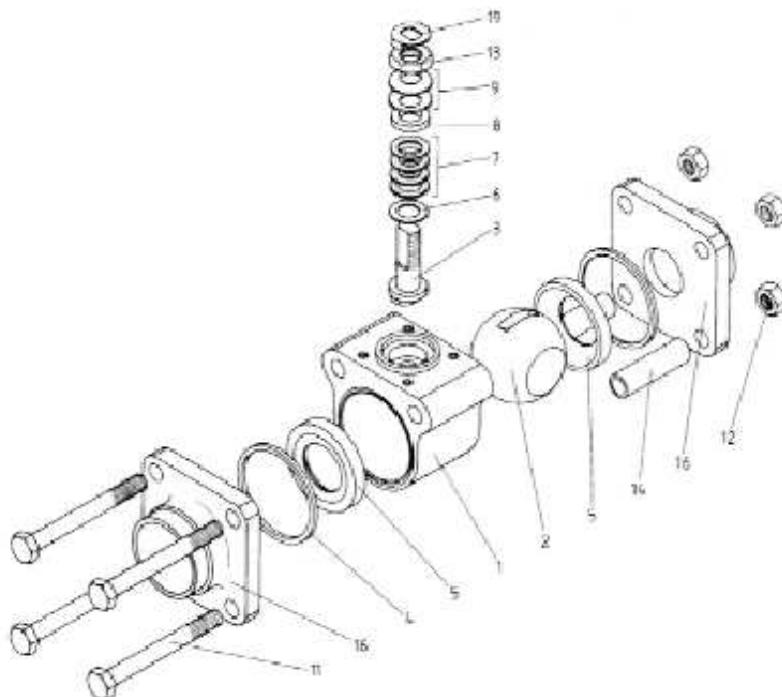

Attention! Liquid residues can be in the ball valve.

1. Shut off connecting lines, let down line pressure and drain pipeline if possible.
2. Disconnect electric and pneumatic connections.
3. Remove feedback.
4. Loosen all body screws (11) and remove the two upper screws.
5. Take off actuator to the top and take ball valve (1) out of the pipeline.

Attention! After dismantling of the seals, the ball lies freely in the body. - **In closed position, the ball can drop out of the body!** Proceed with care to avoid damage of the ball.

13.2. Exchange of ball and seats

1. The actuator is separated from the body.
Remove the ball (2) together with the seats (5).
2. For the further disassembly see items 12.1.3 - 12.1.7.

14. Spare Parts Lists

**If damaged seals are exchanged, generally replace all seals.
Complete seal kits are available for valve service
(see spare parts lists).**

The reference numbers of the spare parts for the different valve designs and sizes are included in the attached spare parts drawings with corresponding lists.

Please indicate the following data to place an order for spare parts:

- number of parts required
- reference number / ID number
- designation.

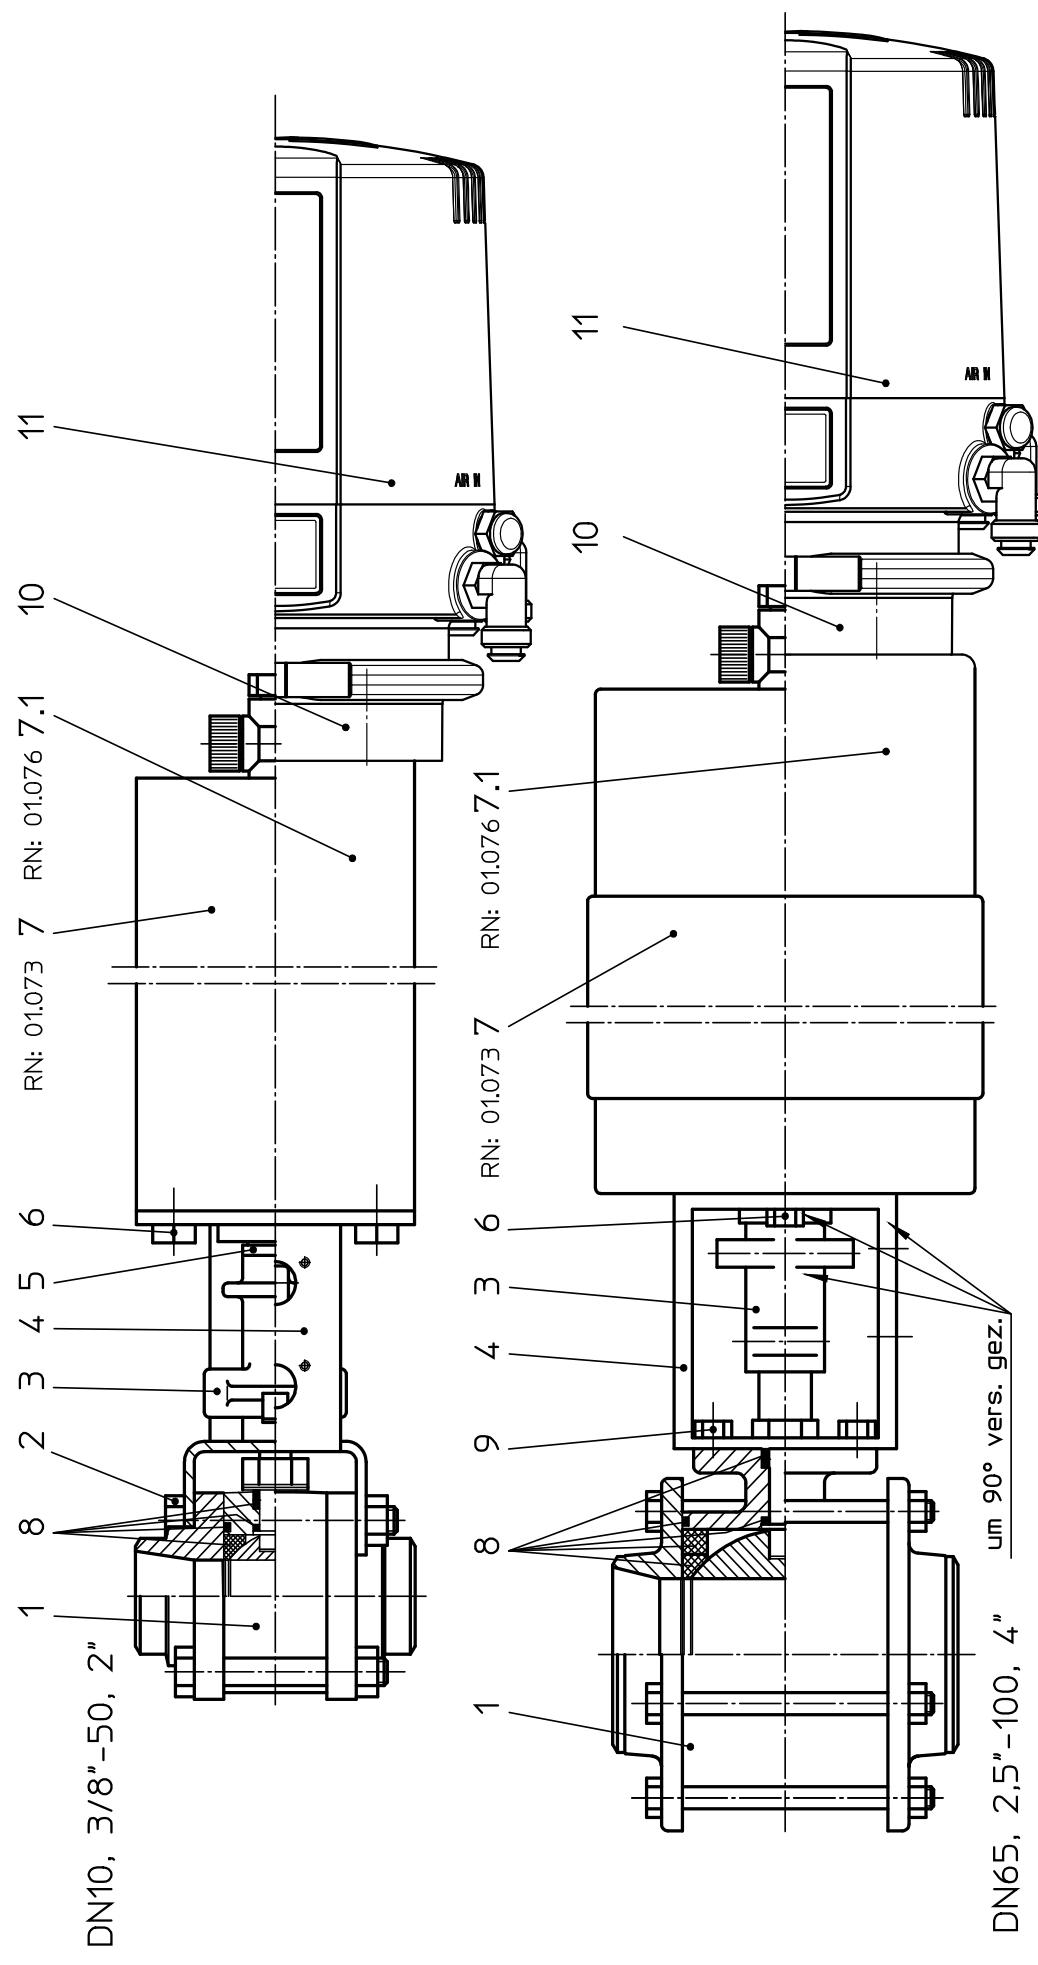

subject to change
