

BUTTERFLY VALVES

A successful range of manual and automatic hygienic butterfly valves which meets the demands of today's processing industries.

Built-in flexibility offers a wide range of options to satisfy diverse industry specification.

Hygienic internal and external design suitable for most food related processing applications and in-place cleaning regimes.

AUTOMATIC OPERATION

The actuator is manufactured in stainless steel with a matt finish.

These actuators can be supplied with the valve or fitted retrospectively to installed valves.

CONTROL BOX

This control box can be fitted to single and double seal, butterfly and ball seat valves.

Recognising that feedback systems can frequently be the cause of breakdowns, the boxes have been engineered with reliability being the main criteria.

BUTTERFLY VALVES

MK2 NON RETURN VALVE COMPONENTS

VALVES BODY COMPONENTS
