

# PasTest2000 - Pasteuriser and Plate Heat Exchanger Leak Detection Test

PasTest2000 is a proven, highly effective, patented non-destructive testing method for plate heat exchangers. It can rapidly detect small leaks in plate heat exchangers without opening the plate pack. PasTest2000 is quick, clean, and accurate. It uses only the local water supply which is pressurised and pumped through the high pressure side of the plate heat exchanger at a measured temperature. The hand-held PasTest2000 unit accurately measures any change in pressure within the closed low pressure side, and any increase in pressure rapidly indicates the presence of a plate defect.

## Keeping YOU Processing

### Benefits of PasTest2000

- DETECTS SMALL LEAKS WITHOUT OPENING UP THE PLATE PACK
- REDUCES PRODUCTION DOWNTIME DUE TO RAPID DETECTION OF LEAKS
- REDUCES THE POSSIBILITY OF A PRODUCT RECALL
- PROVIDES REASSURANCE OF PLATE HEAT EXCHANGER INTEGRITY
- PROVIDES AN EARLY WARNING OF POTENTIAL PROBLEMS
- TESTED BY CAMPDEN BRI, THE UK'S LEADING INDEPENDENT FOOD AND DRINK RESEARCH ORGANISATION
- NO SALINE, COMPRESSED AIR, OR CHEMICALS ARE INTRODUCED DURING THE TEST
- PASTEST2000 USES A SIMPLE, WIRELESS HAND HELD TEST UNIT WITH QUICK FIT CONNECTIONS
- PASTEST2000 IS AVAILABLE AS A PERMANENT INSTALLATION FOR THE DAILY CONDITION MONITORING OF PLATE HEAT EXCHANGERS
